PROFESSIONAL SUMMARY

Backend Software Engineer with 2.5+ years in banking (Banregio / Hey Banco), building Java and Spring Boot microservices, REST APIs, and internal automation tools used by 100–200 developers, with hands-on production support and AI-assisted engineering. Building with Java and Spring since 2019 and looking to grow within an international, English-speaking engineering team.

TECHNICAL SKILLS

Programming: Java, SQL, JavaScript
Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, JWT, REST APIs, Microservices, Swagger/OpenAPI
Databases: PostgreSQL, Sybase, Oracle, SQL Server, Redis
Testing & Quality: JUnit, Mockito, Postman, SonarQube, Checkmarx
DevOps & Tools: Git, GitHub Actions, Maven, OpenShift, JasperReports, Jira
AI-Assisted Engineering: Claude, prompt and workflow design, GitHub Actions automation
Practices: Agile/Scrum, code reviews, incident response, technical documentation

PROFESSIONAL EXPERIENCE

BANREGIO / HEY BANCO | Monterrey, Nuevo León, Mexico (Remote)
Junior Backend Developer | Nov 2024 – Aug 2026
Backend Developer Intern | Jan 2024 – Nov 2024

- Developed and maintained 10+ Java 11/Spring Boot microservices and REST APIs for Toolbox, an internal platform of ~30 automation tools available to 500+ developers (100–200 active users), with persistence in PostgreSQL, Sybase, and Redis.
- Built 1 new tool and optimized 8+ existing ones that automate repetitive tasks for the bank's development teams, replacing manual database queries and updates with faster, less error-prone self-service workflows.
- Refactored the customer authentication flow across ~12 microservices to retire a legacy user type, preserving individual, business, and self-employed customer scenarios; validated with Android/iOS test matrices and released to all environments.
- Automated Toolbox's daily, weekly, and monthly usage report (Spring Boot, Java Swing, JasperReports), cutting generation time from ~30 to ~4 minutes (~87%).
- Evolved a starter template into a multi-repository AI documentation workflow (Claude, GitHub Actions, service.yaml) for 3 internal banking services, cutting run time from ~15 to ~5–7 minutes; planned for bank-wide use.
- Coordinated with multiple development teams to standardize YAML/OpenShift microservice configurations for a High Availability initiative across Banregio and Hey Banco, troubleshooting deployment issues.
- Wrote unit, integration, and regression tests (JUnit, Mockito), resolved SonarQube and Checkmarx findings, and backed up production incident response and deployments within a 10–15 person Scrum team.

ONECARD | Montemorelos, Nuevo León, Mexico
Front-End Developer Intern (Part-Time) | Jan 2022 – Jul 2023

- Built the front end of a production transaction-monitoring app (JavaScript, jQuery, Chart.js) with 4 near-real-time charts and visual/sound alerts after more than 5 consecutive failed transactions.
- Integrated REST APIs with the backend team and wrote SQL Server queries for ~5 internal features, including admin forms and PDF reports.

UNIVERSIDAD DE MONTEMORELOS | Montemorelos, Nuevo León, Mexico
Software Developer Intern (Part-Time) | Aug 2019 – Dec 2021

- Delivered 20+ features across ~3 internal systems, mainly the Academic System used daily by students, faculty, and staff (Java, Spring Boot, Spring MVC, JPA/Hibernate, Oracle, Thymeleaf).
- Translated requirements from Finance and other departments into system changes within a 6-person team.

EDUCATION

B.S. in Computer Systems Engineering | Universidad de Montemorelos | Aug 2019 – May 2024 | GPA 9.09/10

LANGUAGES

Spanish (Native), English (B2 – Upper-Intermediate)
